Digital history involves applying new and emerging technologies to the study of the past. In this course, we explore the literature on digital history, and then put theory into practice by digitally collecting, evaluating, and producing historical knowledge. Along with discussing what is digital history and how it is evolving, this course will introduce students to text mining, geographic information systems (GIS) and developing historical websites. Students will get hands-on experience with a wide range of digital skills and use these new methods to develop a final digital history project.
